## SAFETY INSTRUCTIONS

### SAFETY CHECK AFTER SERVICING

Confirm the specified insulation resistance between power cord plug prongs and externally exposed parts of the set is greater than 10 Mohms, but for equipment with external antenna terminals (tuner, receiver, etc.) and is intended for  $\square$  or  $\Delta$ , specified insulation resistance should be more than 2.2 Mohms (ground terminals, microphone jacks, headphone jacks, line-in/out jacks etc.)

### PRECAUTIONS DURING SERVICING

1. Parts identified by the  $\Delta$  symbol parts are critical for safety.  
Replace only with parts number specified.
2. In addition to safety, other parts and assemblies are specified for conformance with such regulations as those applying to spurious radiation. These must also be replaced only with specified replacements.  
Examples: RF converter, tuner units, antenna selector switches, RF cables, noise blocking capacitors, noise blocking filters, etc.
3. Use specified terminal wiring. Note especially:
  - 1) Wires covered with PVC tubing
  - 2) Double insulated wires
  - 3) High voltage leads
4. Use specified insulating materials for hazardous live parts. Note especially:
  - 1) Insulation Tape
  - 2) PVC tubing
  - 3) Spacers (Insulating Barriers)
  - 4) Insulation sheets for transistors
  - 5) Plastic screws for fixing misomatch (especially in turntable)
5. When replacing AC primary side components (transformers, power coils, noise blocking capacitors, etc.), wrap ends of wire securely about the terminals before soldering.

6. Observe that wires do not contact heat producing parts (transformers, oxide metal film resistors, fusible resistors, etc.).
7. Check that replaced wires do not contact sharp edged or pointed parts.
8. Also check areas surrounding repaired locations.
9. Use care that foreign objects (screws, solder droplets, etc.) do not remain inside the set.

### Voltage conversion

Models for Canada, USA, and Japan are not equipped with this facility. Each machine is preset at the factory according to its destination, but some machines can be set to 110V, 120V, 220V or 240V as required.

If your machine's voltage can be converted:

Before connecting the power cord, turn the VOLTAGE SELECTOR located on the bottom panel with a screwdriver until the correct voltage is indicated.

### III. CONTROLS AND UNIT CONNECTIONS

Fig. 3-1

#### TIME control

This control is used to lock the pitch at the maximum setting. The tuning can be adjusted over a range of a 30 cents. Tuning that exceeds these limits will increase the pitch while playing. It means it will sharpen the pitch. Finally, there is a control at the center position.

#### EEPROMS button and indicator (Key Transpose)

This key is used to transpose the key over a range of 47 octaves, referenced to C. Press the button once more to cancel the function. The indicator goes out.

#### EEP/EEPROM EP/EEPW buttons

Use these buttons during the edit mode to change the register and compass scale for one instrument at a time. While also functioning as data first enter buttons, during a performance for example, the buttons will also operate as the program up or program down buttons when changing the voice data associated in steps A, steps B or the ANALYST keys, for one instrument at a time.

#### EEPROM levels

This control is used for coarse adjustment to the parameter data during the edit mode.

#### WAVE button

Use this button to set the WAVE parameter to the desired waveform. The waveform selection channel will be highlighted in channel 1 when the panel is turned on.

#### W. WAVE1, W2 button and Indicator (Waveform Wave)

Use this button to activate the edit and frequency of the WAVE to be controlled by the W. WAVE. Press the button once again to cancel the function, leaving the indicator in green.

#### W. WAVE1, W2 button and Indicator (Waveform Wave)

Use this button to activate the register frequency of the waveform (WAVE 1 & WAVE 2) to be controlled by the W. WAVE. Press the button once again to cancel the function, leaving the indicator in green.

#### WAVE button and indicator

Use this button to activate the voice data channel during EDIT mode into channel 1 or 2. Press the EDIT button to update the waveform during operation.

#### WAVE button and indicator

This button is used to enter the edit mode data channel in the WAVE channel 1, 2 or WAVE1/2 or the voice data bank. To verify, additional the voice data channel on bank, or to load the recorded voice data into bank 1 or 2 of the bank. To cancel this function, press the button when the first indicator of the WAVE1/2 bank display turns to blue, deactivating indicator to green.

#### W. Waveform and indicator

This button is used to activate the voice data channel during the edit mode, or when editing the voice data in the memory bank 1 or 2. It is possible to write new data into these memory banks.

#### Control

These buttons have directly been connected into the respective memory bank 1 and 2. It is possible to load data into the memory bank during the edit mode, since entering new data will update previous data to be stored.

#### WAVE button and indicator

This button is used when entering a certain channel, or for single-channel editing. Use this button to enter the edit mode when required. To cancel this function, press the WAVE button once again to cancel the function, leaving the indicator in green.

#### WAVE control

Use this control to adjust the output level of the WAVE1/2 or the WAVE3/4.

#### WAVE button and indicator

Press this button to enter the edit mode of the WAVE parameter during the WAVE control. Press the button once again to cancel the function, leaving the indicator in green.

#### WAVE button and indicator

This button is used for the activation of voice data channel in the WAVE or WAVE1/2 bank for the activation of an edit mode when data.

#### WAVE button and indicator

## I N D E X

Bulletin No.	Subject No.	Description
AX88/1	001	Change of Voice Control IC
	002	IC TC4013BP name change

001 Subject: To improve performance

To improve sound quality, Voice Control IC (IC104 - 804 in Voice P.C. Board) CEM3372B has been changed to CEM3372C. The program of ROM IC (IC4 in CPU P.C. Board) uPD2764D-I has also been changed to uPD2764D-K.

	IC104 - 804	Part No.	IC4	Part No.
Old	CEM3372B	EI-354184	uPD2764D-I	EI-354143
New	CEM3372C	EI-359630	uPD2764D-K	EI-359631

When one of Voice Control IC is changed from Old type to New type and vice versa, it is necessary to replace all Voice Control ICs and ROM IC at the same time.

Changed from : January 1985

Interchangeability : Not interchangeable

The following shows how to identify old and new ICs.

## 002 Subject: Parts Information

## Change of Part Name.

Because of the new type IC TC4013BP production, the IC manufacture has changed the name of old type IC TC4013BP to TC4013BAP. Old type IC TC4013BP and IC TC4013BAP are interchangeable.

Since old type TC4013BP and new type TC4013BP function differently, IC itself can not be substituted. However, this change should not affect the operation of AX80 even when a new TC4013BP is installed.

The new type IC can be identified by its Lot Number. The letter 'B' will be added to its Lot Number.

Old type TC4013BP	8501H
New type TC4013BP	8521HB

The chart below shows the difference of their function.

001 Subject: To improve performance

To improve sound quality, Voice Control IC (IC106 - 806 in Voice P.C. Board) CEM3372B has been changed to CEM3372C. The program of ROM IC (IC4 in CPU P.C. Board) uPD2764D-1 has also been changed to uPD2764D-K.

	IC106 - 806	Part No.	IC4	Part No.
Old	CEM3372B	EI-354184	uPD2764D-1	EI-354145
New	CEM3372C	EI-359630	uPD2764D-K	EI-359631

When one of Voice Control IC is changed from Old type to New type and vice versa, it is necessary to replace all Voice Control ICs and ROM IC at the same time.

Changed from : January 1985

Interchangeability : Not interchangeable

The following shows how to identify old and new ICs.

## 002 Subject: Parts Information

## Change of Part Name.

Because of the new type IC TC4013BP production, the IC manufacture has changed the name of old type IC TC4013BP to TC4013BAP. Old type IC TC4013BP and IC TC4013BAP are interchangeable.

Since old type TC4013BP and new type TC4013BP function differently, IC itself can not be substituted. However, this change should not affect the operation of AX-80 even when a new TC4013BP is installed.

The new type IC can be identified by its Lot Number. The letter 'B' will be added to its Lot Number.

Old type TC4013BP	8501H
New type TC4013BP	8522HB

The chart below shows the difference of their function.
